Course Outcome 3 : Design and implement programs involving Client and Server Side Programming.

Experiment 04 : Design a login webpage in JSP that makes validation through Database using JDBC and call the servlet for various operations.

Problem Statement:

Login Web Application using **JSP**, **Servlet**, and **JDBC** that:

- Displays a login form (login.jsp)

- Validates credentials against a database

- Uses a servlet (LoginServlet.java) for processing

- Redirects to a welcome page upon success or error page on failure

Project Structure

MyLoginApp/

├── WebContent/

│   ├── login.jsp

│   ├── welcome.jsp

│   ├── error.jsp

│   └── WEB-INF/

│   └── web.xml

└── src/

    └── com.example/

        └── LoginServlet.java
